10. Meeting Closure

Increased pressure on land owners and land users to implement effective veld fire management strategies led to a reciprocating increase on FPA's to improve the level of technical service and support offered to members. The increased demand for human and other resources cannot be met by smaller FPA's in a sustainable manner. The NEFS FPA was formed when it became clear that smaller FPA's is no longer viable. The NEFS FPA covers an area of 1.25 million hectares in the Eastern Thabo Mafutsanyana District in the Free State.
